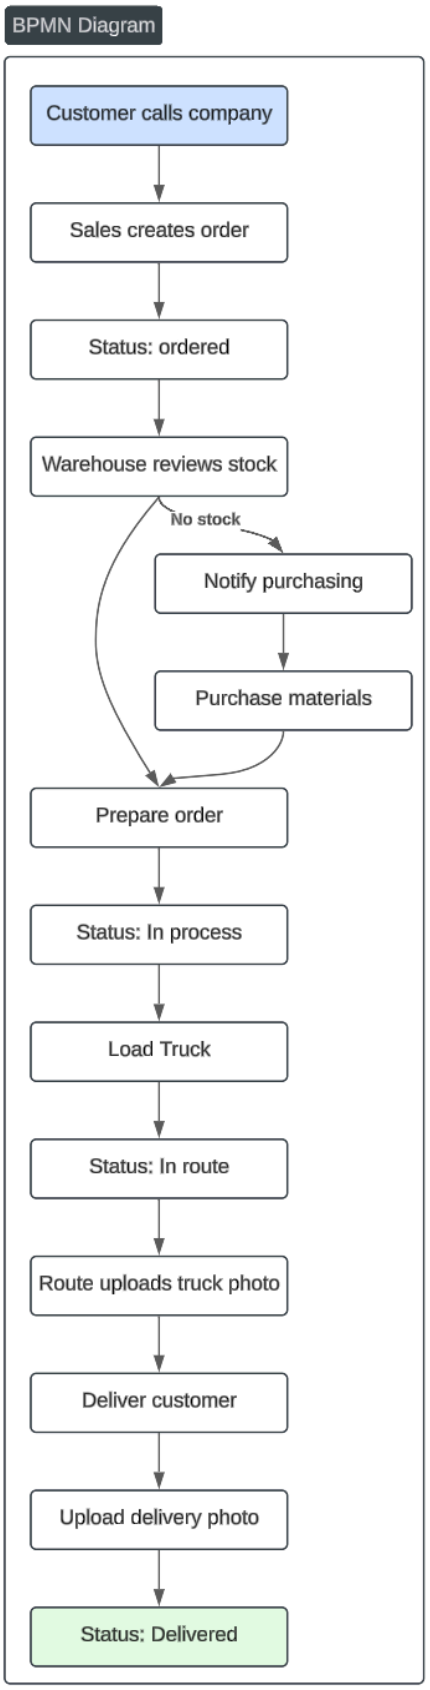
Work methodology selected

This project will have several functional modules, which can be developed incrementally and delivered in parts.

Scrum is ideal because it allows the project to be divided into short sprints, where each sprint delivers fully operational functionality. This makes it easier to validate progress with the client, detect improvements early on, and adjust requirements if necessary without compromising the entire project.

Sprint	Duration	Deliverables
Sprint 1	1 week	Authentication + Roles
Sprint 2	1 week	Order creation + Lifecycle
Sprint 3	1 week	Customer tracking screen
Sprint 4	1 week	Dashboard + Search + Logical delete
Sprint 5	1 week	Photo upload + Testing

Diagrams



BPMN Diagram
Customer calls company
Sales creates order
Status: ordered
Warehouse reviews stock
No stock
Notify purchasing
Purchase materials
Prepare order
Status: In process
Load Truck
Status: In route
Route uploads truck photo
Deliver customer
Upload delivery photo
Status: Delivered

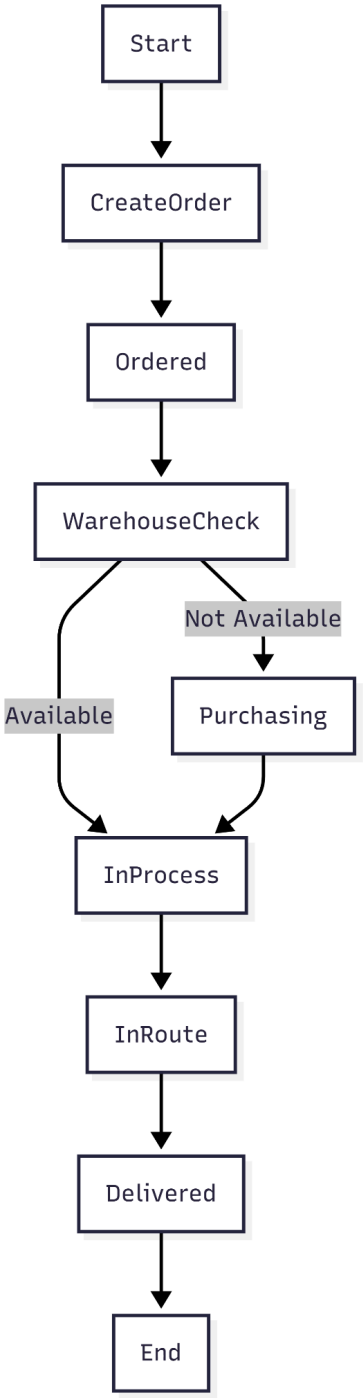
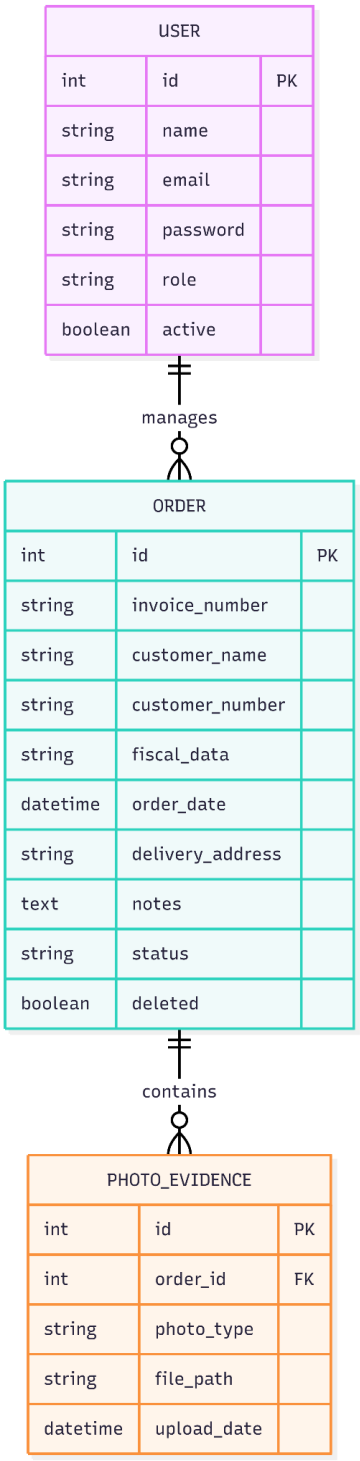
Activity Diagram



Data Base

ER Diagram



USER

Field	Type
id	INT (PK, Auto Increment)

name	VARCHAR(100)
email	VARCHAR(100)
password	VARCHAR(255)
role	ENUM('Admin','Sales','Purchasing','Warehouse','Route')
active	BOOLEAN

ORDER

Field	Type
id	INT
invoice_number	VARCHAR(50)
customer_name	VARCHAR(150)
customer_number	VARCHAR(50)
fiscal_data	TEXT
order_date	DATETIME
delivery_address	TEXT
notes	TEXT
status	ENUM('Ordered','In process','In route','Delivered')
deleted	BOOLEAN

PHOTO_EVIDENCE

Field	Type
id	INT
order_id	INT (FK)
photo_type	ENUM('Route','Delivery')
file_path	VARCHAR(255)
upload_date	DATETIME

reflection

This project helped me understand that developing an application is not just about programming, but also about analyzing how a company really works and organizing its processes well. I realized that planning with diagrams and methodology makes the work much easier and prevents errors later on. I also understood the importance of properly managing roles and security within the system.
